ICS : 91.140.10, 91.140.65
National Ref : ÖNORM H 5195-1
Title : Heat medium for technical building equipment - Part 1: Prevention of damage by corrosion and scale formation in closed warm-water-heating systems
Scope : This Austrian Standard specifies requirements for planning, design and operation activities for prevention of corrosion damage, scale formation and deposits in closed water-based heating systems with operating temperatures with a maximum allowable temperature to 110 ° C. This Austrian Standard is applicable to newly installed systems. This ÖNORM is to be used for the conversion and operation of existing systems. It shall be applied to closed heating systems, heated directly by boilers and indirectly by converters (according to ÖNORM EN 12828) with operating temperatures up to maximum 105 °C. For district heating networks, the directives defined by the network operator apply. If the manufacturer of the heating system or the producer of the components define specifications exceeding the requirements of this Austrian Standard, these shall be observed

ICS :	03.100.01, 03.100.02, 03.100.70	
National Ref :	ÖNORM ISO 37301	
Title :	Compliance management systems - Requirements with guidance for use	
Scope :	This document specifies requirements and provides guidelines for establishing, developing, implementing, evaluating, maintaining and improving an effective compliance management system within an organization. This document is applicable to all types of organizations regardless of the type, size and nature of the activity, as well as whether the organization is from the public, private or non-profit sector. All requirements specified in this document that refer to a governing body apply to top management in cases where an organization does not have a governing body as a separate function.

Title :	Soils for use in road construction - Test methods - Part 2 - Test methods for laboratory reference density and water content - Proctor compaction		
Scope :	<p>This national standard describes methods for the determination of the laboratory reference (characteristic) density and water content by Proctor compaction in the investigation of soils used in the construction of roads and other traffic areas.</p> <p>The purpose of proctor compaction is to determine the dependence of the density of the compacted dry soil on the amount of water according to the specified test conditions. This test is used to assess the density of soil that can be reached on construction sites and the density of natural or compacted dry soil. The test results also determine the amount of water that can be used to compact the dry soil to the required density.</p>

Title :	Soils for use in road construction – Test methods – Part 1 – Determination of particle size distribution		
Scope :	<p>This national standard describes a method for the determination of the particle size distribution of soil by sieving of soils used in the construction of roads and other traffic areas.</p> <p>The particle size distribution is one of the most important physical properties of the soil. Determination of particle size distribution is the most commonly used method for soil classification. Many geological and geohydrological properties of the soil are related to the particle size distribution.</p> <p>NOTE 1 The method for determining the particle size distribution of soil fine particles by hydrometric or pipetting methods is described in LST EN ISO 17892-4 Geotechnical investigation and testing. Laboratory soil testing. Part 4. Determination of particle size distribution (ISO 17892-4: 2016)</p>
