National Ref :	prNP 4498-1		
Title :	Meat and meat products - Determination of sulfites contente - Part 1: Enzymatic method (reference method)		
Scope :	This standard is intended to set an enzymatic method for the determination of sulfites content, expressed as sulfur dioxide, in meat and meat products. Other products containing sulfur as, sulfate, sulfide or thiosulfate have no interference in the determination. Carbonyl-sulfite complexes react as free sulfites. Isothiocyanates, which are found for example in mustard, interfere with this determination. The method is not applicable to dehydrated cabbage, garlic and onions, ginger, broccoli and soy protein

Title : Systems (Kits) for external wall claddings mechanically fixed
Scope : This National Standard specifies methods for the assessment of Systems for External Wall Claddings Mechanically Fixed (SEWCMF). The term "system" describes the "combination of products" (kit), as defined in Article 2 of EU Regulation 305/2011, always including the cladding element and an air space between the cladding elements and the wall front which shall always be drained. The components of the system are assembled on site in accordance with the manufacturers instructions, and thus, become a non-airtight "assembled cladding system". The SEWCMFs covered by the current standard are non load-bearing construction elements, that do not contribute to the stability of the wall in which they are installed and should fulfil their own integrity and mechanical stability. This National Standard is in accordance with the "European Assessment Document – EAD 090062-00-0404 (2018): Kits for External Wall Claddings Mechanically Fixed" with completions mostly in the fields of a) Fire performance - Fire performance of External Cladding System – Fire spread to multiple floors and b) Seismic Actions - Development of standard qualification testing for different performance levels of SEWCMF. This National Standard does not cover cladding systems or cladding elements made of self-supporting double skin metal faced insulating panels according to EN 14509, composite panels except the Thin Metallic Composite Panels (TMCP) as described in EOTA TR 038, a render sprayed in situ on metal mesh, panels covered by a render applied in situ. glass, agglomerated stone according to EN 15286. Furthermore, it does not cover either cladding systems with cladding elements glued to the subframe, curtain wall products according to EN 13830, window and door products, cladding elements in contact with ground, external suspended ceiling kits or kits including non-vertical parts.

Title : Ventilation from places with gas-burning appliances - Part 2: Dwellings; Single flux centralized mechanical ventilation
Scope : The purpose of this standard is to define the rules to be followed by the centralised mechanical ventilation systems in dwellings, so that they contribute to a satisfactory indoor air quality¹⁾ by admitting fresh supply air and evacuating saturated air, in conditions of thermal and acoustic comfort and energy efficiency. They must also provide suitable conditions for air intake and the exhaustion of combustion products for the operation of gas appliances. This document defines the rules for design, dimensioning and execution applicable to installations for the mechanical extraction of exhaust air in a controlled manner in dwellings, known as centralised mechanical ventilation (CMV) installations.

Title : Petroleum products — Determination of aromatics in diesel fuel — Mono-and di-aromatic components and PAH
Scope : This document specifies a method for the determination of mono-, di-, tri- and higher aromatic hydrocarbons in diesel fuels, paraffinic diesel fuels and petroleum distillates with a boiling point between 150 °C and 400 °C without the addition of fatty acid methyl esters (FAME).
 The range of the method in this standard is the volume fraction 0,2 % to 6 % for mono-aromatics, the volume fraction 0,1 % to 3 % for di-aromatics and the volume fraction 0,02 % to 0,5 % for higher aromatic hydrocarbons.
 The method can be applied after dilution for higher aromatic content.

Title : Verification and check of household and similar electrical appliances and hand-held electrical tools during their use
Scope : STN 33 1600: 1996 (for verification and check of electrical hand-held tools during their use) is obsolete. Its requirements are derived from the out-of-date methods of measuring which are not applicable to the present-day tools. It is necessary to bring this standard up to the today's level and to merge it with the standard STN 33 1610: 2002 (for verification and check of household and similar electrical appliances during their use) into one single document. The revision of both standards aims to prepare and publish one national standard for verification and check of electrical appliances and hand-held electrical tools during their use aligned with European standards EN 50699:2020 and EN 50678:2020.

Title :

Beauty Salon Services - Requirements and recommendations for the provision of service

Scope :

This document provides requirements and recommendations for the delivery of beauty treatments performed by a suitably qualified beauty therapist. Recommendations are provided for client management to ensure client safety during any beauty treatments. The delivery of beauty salon services is limited to the boundaries of the qualification of the individual beauty therapists obtained through a recognized education provider. Medical procedures including aesthetic surgical procedures and cosmetic injectable procedures including sclerotherapy are excluded from the scope of this document. Hairdressing, barbering and body art tattooing services are also excluded from the scope of this document.
