Register issued on : 2023-12-01

Sector 01AGRP: Agricultural, farming, fishing, forestry and related products

Sector :	01AGRP	Registration Date :	2023-11-29
Organization :	UNI		
Country :	Italy		
Project ID :	01613074/0001		Project Established
ICS :	85.060		
National Ref :	UNI1613074		
Title :	Paper and board - Determination of parameters of manual separability between two or more constituents, of which at least one is paper, of a material or product for the purpose of their waste collection		
Scope :	<p>This standard provides a methodology for determining the parameters for manual separability, i.e. the ease with which two or more constituents of a product or packaging, at least one of which is paper, can be separated by hand alone. The purpose of manual separation is the waste collection and recycling in separate streams of the constituents of different nature.</p> <p>The purpose of the standard is to identify the significant parameters and measurement methods in order to provide the elements for an objective and quantifiable assessment, as a measurement tool for eco-design purposes.</p> <p>The standard complements UNI 11743:2019 “Paper and board - Determination of parameters of recyclability of cellulose-based materials and products”, where it is necessary to manually separate the cellulosic components from the other materials before carrying out the test.</p>

Title :	Non-regulated professions - Bee technician - Knowledge, skill, autonomy and responsibility		

Scope : This standard defines the requirements relating to the professional activity of the Bee Technician.
These requirements are specified, starting from the tasks and activities and the identification of the related contents, in terms of knowledge and skills, also in order to clearly identify the level of autonomy and responsibility, in line with the National Qualifications Framework (NQF). These requirements are also expressed in such a way as to facilitate and contribute to making the relevant conformity assessment processes as homogeneous and transparent as possible.

Title : Continuous measurement of CO2 indoors to improve the health and well-being of users
Scope : The purpose of this document is to provide a comprehensive procedure for the implementation, validation and auditing of continuous measurement systems for carbon

dioxide (CO₂), in order to avoid exposing occupants to indoor environments with medium and high values of this gas. The concentration of CO₂ in spaces with exclusively human occupation can serve as an indirect indicator of the accumulation of bioeffluents, as well as a reference value to adequately adjust the ventilation rate at all times. With the establishment of CO₂ thresholds, it is intended to reduce both the negative effects of this gas on health and its impact on cognitive performance, in addition to reducing the risk of transmission of airborne diseases by bio-aerosols.

This document is applicable to buildings for collective use, encompassing administrative, commercial, educational and public uses.

Title : Guidelines for the adoption and integration of management systems, management frameworks and best practices in the areas of Information Technology (IT)
Scope : This document presents a guide or technical specification aimed at guiding and assisting organisations in the adoption and integration in IT areas of management systems based on ISO standards, recognised management frameworks and specific best practices.
 The goal is to draw lessons from successful experiences to ease the way in the adoption and integration of Accredited Knowledge and thus contribute to the resolution of the various starting issues of IT organisations. It is proposed to provide guidance for the adoption of the more complex frameworks and standards on the one hand, and a simple way to adopt concrete and individual practices on the other hand. In this guide, recommendations are formulated to help on the way to adopting best practices, integrating existing knowledge and aligned with the ISO culture.
 The scope of application focuses on the areas of information technology (IT), for all types and sizes of organisations. But as it is about adopting or improving ways of working, the recommendations are clearly applicable to other areas of organisations as well.

Title : State of the art of professional productivity in the Digital Era in the areas of Information Technology (IT)

Scope : This document presents a study on the state of the art of productivity in the professional environment.

The scope of this study focuses on the areas of information technology (IT), for all types and sizes of organisations. But as it is about improving productivity or efficiency at work, the recommendations are clearly applicable to any sector and any area of organisations.

Many professionals are completely saturated by their jobs, with working hours that need to be extended in order to be able to perform all the tasks entrusted to them, generating situations of continuous stress and invasion of private life by the work environment. Fatigue, lack of enthusiasm, routine, tiredness and illness are the breeding ground of this increasingly frequent work scenario. The world of work is not aware that this situation has a solution. A lot of knowledge has been generated in the market focused on making professionals happier, more satisfied, relaxed and productive. However, this knowledge has not reached the management layers of organisations, and productivity is often considered an internal and private matter of each person.

To break this scenario of unconscious incompetence, in which executives and professionals are not aware that they have a serious problem and that this problem has a solution, the goal of this study is to discover and compile all the existing knowledge related to improving productivity in organisations, in order to enlighten a world of work on the road to change. A set of best practices distilled from interviews with gurus or benchmarks in this discipline and from publications and references has been compiled.

Title : Reference Model for professional productivity in the Digital Era for Information Technology (IT) areas

Scope : This document defines a reference model for the productivity of IT organisations, which serves as a basis for service providers to draw inspiration from in the creation of their own applications of the model. It is also directly focused on helping professionals and organisations to start their own productivity improvement journey. The reference model aims to expand the market and encourage the proliferation of mature, integrated management systems.

The reference model for IT productivity is positioned as a base architecture that allows others to generate their own working systems aimed at improving productivity. It is not intended to compete as a market model, but to be a reference for the creation of productivity models.

The scope of application of this technical specification is in the areas of information technology (IT), for all types and sizes of organisations. As it is about improving productivity or work efficiency, the recommendations are clearly applicable to any sector and to any area of organisations beyond IT.
